PROJECTS

1. https://primaryleap.co.uk **(Education Management Systems)**

- Developed a comprehensive educational website catering to educators, students, and teachers, providing a seamless learning experience for all stakeholders.
- Implemented a secure and user-friendly login system with three distinct roles - educator, student, and teacher - to tailor content and functionalities based on user types.
- Successfully integrated Stripe payment method to facilitate easy and secure online transactions, enabling users to access premium educational resources and services.
- Designed and built an intuitive user interface, ensuring smooth navigation and efficient access to a wide range of educational materials and interactive activities.

2. https://hrm.devsspace.com **(Human Resource Management)**

- Employee Module: Manage employee records, personal details, and job-related information efficiently.
- Leaves Module: Streamline leave requests and approvals for different leave types (full, half leaves).
- Payroll Module: Automate salary calculations, generate payslips, and handle deductions and benefits.
- Career Module: Provide a platform for candidates to apply online for job openings.
- Attendance System: Track and record employee attendance for punctuality monitoring.

3. https://nexuserp.com/ **(ERP Systems)**

- The ERP system includes role-based access control, ensuring that users only have access to relevant information and functionalities based on their roles within the organization.
- Nexus ERP provides robust customer support and training resources to help users maximize the system's potential and navigate through any challenges effectively.
